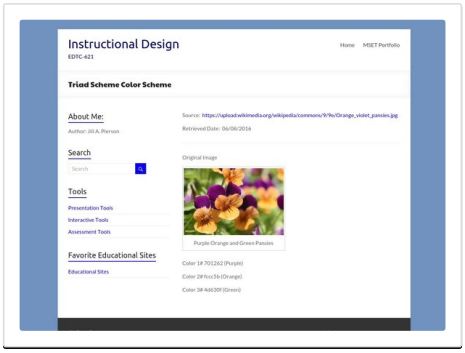
Summary



Performance grade	Load time	Faster than	Page size	Requests	Tested from
C 73	3.93 s	43 % of tested sites	234.5 kB	27	New York City on June 9 at 23:20:51

Performance insights

GRADE		SUGGESTION
F	0	Minimize request size
E	54	Leverage browser caching
D	66	Remove query strings from static resources
D	66	Specify a cache validator
A	99	Serve static content from a cookieless domain
A	100	Avoid bad requests
A	100	Minimize redirects
A	100	Specify a Vary: Accept-Encoding header

Response codes

RESPONSE CODE		RESPONSES
200	OK	27

Content size by content type

CONTENT TYPE	PERCENT	SIZE
Other	42.9 %	100.61 KB
Script	27.0 %	63.39 KB
CSS	20.7 %	48.51 KB
Image	6.3 %	14.68 KB
HTML	3.1 %	7.33 KB

State Colors

The following colors are used in the bars in the waterfall chart to indicate the different stages of a request.

DNS	Web browser is looking up DNS information
SSL	Web browser is performing a SSL handshake
Connect	Web browser is connecting to the server
Send	Web browser is sending data to the server
Wait	Web browser is waiting for data from the server
Receive	Web browser is receiving data from the server

Content Types

The following icons are used to indicate different content types.

HTML	HTML document
Javascript	JavaScript file
CSS	CSS file
Image	Image file

Nobody Likes a Slow Website

We built this Website Speed Test to help you analyze the load speed of your websites and learn how to make them faster. It lets you identify what about a web page is fast, slow, too big, what best practices you're not following, and so on. We have tried to make it useful both to experts and novices alike.

In short, we wanted it to be a easy-to-use tool to help webmasters and web developers everywhere optimize the performance of their websites.

Feature Overview

Examine all parts of a web page – View file sizes, load times, and other details about every single element of a web page (HTML, JavaScript and CSS files, images, etc.). You can sort and filter this list in different ways to identify performance bottlenecks.

Performance overview – We automatically put together plenty of performance-related statistics for you based on the test result

Performance grade and tips – See how your website conforms to performance best practices from Google Page Speed (similar to Yahoo's Yslow). You can get some great tips on how to speed up your website this way.

Trace your performance history – We save each test for you so you can review it later and also see how things change over time (with pretty

Text/plain	Plain text document
Other	Any other content type, for example flash files
Warning	The request got a 4XX, 5XX response or couldn't be loaded
Redirect	The request got a 3XX response and was redirected

Server Response Codes

To make it easy for you to differentiate between the HTTP response codes in the waterfall chart, we've color-coded the text and background of each URL.

URL	**2xx**	The server responded with a successful code
URL	**3xx**	The request was redirected to another target
URL	**4xx**	A client error occured, for example 404 page not found
URL	**5xx**	A server error occured, for example 500 internal server error
URL	**Error**	Connection error, no response from the server

charts!).

Test from multiple locations – See how fast a website loads in Europe, the United States, etc.

Share your results – We've made it easy for you to perform a test and share it with your friends, work colleagues or web host.

How it works

All tests are done with real web browsers, so the results match the end-user experience exactly. We use a bunch of instances of Google's Chrome web browser to load websites, record performance data, and so on. Tests are done from dedicated Pingdom servers.
